

EdgeData & Logistics

- There are many existing aids for normal logistics, including web based maps, GPS tracking and web-sites that can provide the status of a package or load of materials. But emergency logistics or adaptive logistics are necessary when a government, business, community and other involved entities have to work together.
 - Who? EdgeData employees help during the conduct of drills, with scenarios, solution mapping and information gathering to define response logistics.
 - What? EdgeData produces defined workflows with alerting, notifications, images, feeds and data source reveals that avoid the impact of uncontrolled communications..
 - When? EdgeData can support your “drill” or “event” as part of a prepared activity or as an emergent activity when the process has to be documented and understood broadly.
 - Why? EdgeData has tools that enable comprehensive communications between disparent groups.
 - How? EdgeData can observe the workflows, gather the contacts and build the application on the fly, including documentation of decision-making based on the known facts at the time.
