

EdgeData & Pluralistics

- Pluralistics are dominating influences in partnering with suppliers, customers and employees. Value and belief systems can represent biases that have to be considered in internal and external workflows. Biases can result in advantages, challenges and relationships.
 - Who? EdgeData employees map the pluralistics in play by working with the mission, values and ethics statements for alignment within and outside the company.
 - What? EdgeData identifies the impact on workflows for desired and undesired pluralistic influences.
 - When? EdgeData suggests a pluralistic review when a process is “broken”, or when significant compliance or regulatory issues exist and when combining entities through acquisitions or partnering agreements..
 - Why? EdgeData can help reduce the impact of different values and belief systems when establishing workflows..
 - How? EdgeData compares and contrasts the existing and desired states, tests each step of the workflow against that measure and benchmarks against leading companies in the particular industry.
